

## 11.1P Clock in C++

clock.cpp

```
#include "Clock.h"
```

```
#include <iomanip>
```

```
#include <sstream>
```

```
Clock::Clock() : _hours("hours"), _minutes("minutes"), _seconds("seconds") {}
```

```
void Clock::Tick() {
```

```
    _seconds.Increment();
```

```
    if (_seconds.GetTick() > 59) {
```

```
        _seconds.Reset();
```

```
        _minutes.Increment();
```

```
        if (_minutes.GetTick() > 59) {
```

```
            _minutes.Reset();
```

```
            _hours.Increment();
```

```
            if (_hours.GetTick() > 23) {
```

```
                ResetTime();
```

```
            }
```

```
        }
```

```
    }
```

```
}
```

```
void Clock::ResetTime() {
```

```
    _hours.Reset();
```

```
    _minutes.Reset();
```

```
    _seconds.Reset();
```

```
}
```

```

std::string Clock::CurrentTime() const {
    std::ostringstream timeStream;

    timeStream << std::setw(2) << std::setfill('0') << _hours.GetTick() << ":"
        << std::setw(2) << std::setfill('0') << _minutes.GetTick() << ":"
        << std::setw(2) << std::setfill('0') << _seconds.GetTick();

    return timeStream.str();
}

```

counter.cpp

```
#include "Counter.h"
```

```
Counter::Counter(std::string name, int count) : _name(name), _count(count) {}
```

```

void Counter::Increment() {
    _count++;
}

```

```

void Counter::Reset() {
    _count = 0;
}

```

```

int Counter::GetTick() const {
    return _count;
}

```

Main.cpp

```
#include <iostream>
```

```
#include <thread>
```

```
#include <chrono>
```

```
#include "Clock.h"
```

```
int main() {
```

```
    Clock clock;
```

```
    for (int i = 0; i < 86400; ++i) { // Simulate a full day (86400 seconds)
```

```
        std::this_thread::sleep_for(std::chrono::seconds(1)); // Wait for 1 second
```

```
        system("CLS"); // Clear the console (works on Windows)
```

```
        clock.Tick();
```

```
        std::cout << clock.CurrentTime() << std::endl;
```

```
    }
```

```
    return 0;
```

```
}
```

Header file

clock.h

```
#pragma once
```

```
#include "Counter.h"
```

```
#include <string>
```

```
class Clock {
```

```
private:
```

```
    Counter _hours;
```

```
    Counter _minutes;
```

```
    Counter _seconds;
```

```
public:
```

```
    Clock();
```

```
void Tick();  
void ResetTime();  
std::string CurrentTime() const;  
};  
  
Counter.h  
#pragma once  
#include <string>  
  
class Counter {  
private:  
    int _count;  
    std::string _name;  
  
public:  
    Counter(std::string name, int count = 0);  
  
    void Increment();  
    void Reset();  
    int GetTick() const;  
};
```

Outcome
